

**NATURAL ENVIRONMENT RESEARCH COUNCIL
(BRITISH ANTARCTIC SURVEY)**

APPLICATION FOR CONSENT TO CONDUCT MARINE SCIENTIFIC RESEARCH IN AREAS
UNDER NATIONAL JURISDICTION OF

Greenland (Denmark)

1. General information

Application Date 20/11/2013

1.1	Cruise name and/or number	RRS James Clark Ross Cruise JR302
1.2	Sponsoring institution. Name Address Name of Director	British Antarctic Survey, High Cross, Madingley Road, Cambridge CB3 OET , UK Professor Jane Francis
1.3	Scientist in charge of the project. Name: Address Telephone Fax/Email/Telex	Dr Brian King National Oceanography Centre Southampton SO14 3ZH T: (44) 23 80596438 E: b.king@noc.ac.uk
1.4	Scientist(s) from, (name coastal state), involved in the planning of the project. Name(s) Address	
1.5	Submitting officer Name Address Telephone Fax/Email/Telex	Mr Chris Hindley (Ship Operations and Programme Manager) British Antarctic Survey, High Cross, Madingley Road, Cambridge CB3 OET , UK + 44 1223 221497 +44 1223 362616 cjhh@bas.ac.uk No Telex

2. Description of project (Attach additional pages as necessary)

2.1 Nature of objectives of the project

This project is a Hydrographic section along the line designated 'AR07' in the CLIVAR/GOSHIP planning (AR07W and AR07E). It runs from Newfoundland across the Labrador Sea to Greenland, and then to the north-west UK. The cruise will also include a section from the main AR7 line up 20W to Iceland. This is a contribution to the international CLIVAR/Carbon repeat hydrography program (http://www.go-ship.org/RefSecs/img/go-ship_map_3000.png).

Climate change will be studied by comparing the new data with historical measurements. In order to determine the ocean contribution to climate change, it is important that the section be completed from continent to continent, ending in shallow water (nominal 100 metres) at each end.

In accordance with UK and international CLIVAR data policy, all UK data from the cruise

will be made publicly and freely available.

This cruise also serves two other research projects. RAGNARoCC is a study on the fate of Greenhouse Gases in the ocean: Inorganic carbon, Methane, and Nitrous Oxide. We will make measurements of those parameters through the water column to assess the rate at which the ocean acts as a sink for these gasses to leave the atmosphere. OSNAP is a multi-national study of the Atlantic Overturning Circulation at the latitude of the sub-polar gyre. The line occupied by this cruise will be instrumented at a later stage with moorings to make time series measurements of ocean current, temperature and salinity.

On a subset of stations, filtered water samples will be analysed ashore at NOC to study phytoplankton community structure.

Floats may be deployed for the international Argo program.

2.2 Relevant previous or future research cruises

Future research cruises by international OSNAP partners (not yet scheduled) are planned along this line to deploy and maintain moored instruments.

2.3 Previously published research data relating to the project

3. Methods and means to be used

3.1 Particulars of vessel

Name	RRS James Clark Ross	
Nationality/Registry	British (Falkland Island Registration)	
Owner	Natural Environment Research Council (NERC)	
Operator	British Antarctic Survey	
Length Overall	99.04m	
Max. Draft	6.4m	
Net / Gross Tonnage	Net: 1719 Tonnes	Gross: 5732 Tonnes
Propulsion	Diesel Electric, Single Fixed Prop 8500 SHP	
Cruising Speed	11.5 Kts	Maximum speed: 16 kts
Call Sign	ZDLP	
Method and capability of communication	Inmarsat: Voice 00870 374 033920 / Fax 374 033924 VOIP Telephone: +44 1223 221 725/6/8 Email: jrmaster@bas.ac.uk	
Name of Master	Captain MJ Burgan	
Number of crew	28	
Number of Scientists	25	

and Technicians**3.2 Aircraft or other craft to be used in the project**

None

3.3 Particulars of methods and scientific instruments (increase table size if needed)

Types of samples and data	Methods to be used	Instruments to be used
Temperature-Salinity-Dissolved Oxygen profiles Full water depth	Instruments lowered from ship on conducting hydrographic wire; continuous recording in vertical; horizontal spacing between 3 and 30 nautical miles, depending on water depth	SeaBird 911 CTD
Seawater samples	24 water samples at each CTD station for chemical analysis onboard ship.	10- or 20-litre 'Niskin' water bottles. Chemical analysers for: dissolved oxygen; dissolved organic and inorganic nutrients; CFCs; SF6; carbon system parameters (TCO ₂ , pCO ₂ , Total Alkalinity); Other greenhouse gasses (CH ₄ , N ₂ O), Noble gas ratios and stable isotopes of dissolved oxygen by MIMS (Membrane Inlet Mass Spectrometry)
Water velocity profiles	Acoustic Doppler Current Profiler attached to CTD package	Lowered Acoustic Doppler Current Profiler 150kHz; 300kHz.
Water velocity underway	Ship-mounted Acoustic Doppler Current Profiler. Continuous underway.	Vessel-mounted Acoustic Doppler Current Profiler 75kHz; 150kHz;
Surface meteorology	Continuous underway sampling	Research ship meteorology instruments. (air pressure; wet/dry temperature; wind speed/direction)
Surface temperature, salinity, CO ₂ , CH ₄ , N ₂ O	Continuous underway sampling from surface pumped seawater supply	Surface thermosalinograph; surface pCO ₂ , CH ₄ , N ₂ O
Water depth	Echo sounder	Simrad EA600/EM120
Air sampling	Pumped air sample	Determination of pCO ₂ for interpretation of water column data
Temperature-salinity profiles in upper 2000 metres	Deployment of floats for the international Argo program	Argo floats
Filtered water samples, phytoplankton community	Low-vacuum filtration of water samples collected via	Filtration racks

structure	CTD, oven dried and stored until analysis back at NOC using Light and Scanning Electron Microscopy	
-----------	--	--

3.4 Indicate whether harmful substances will be used No**3.5 Indicate whether drilling will be carried out** No**3.6 Indicate whether explosives will be used** No**4. Installations and equipment****Details of installations and equipment (dates of laying, servicing, recovery; exact locations and depth):** No moored installations or equipment

5. Geographical areas**5.1 Indicate geographical areas in which the project is to be conducted (with reference in latitude and longitude)** Latitude 52N to 63N Longitude 55W to 5W**5.2 Attach chart (s) at an appropriate scale showing the geographical areas of the intended work and, as far as practicable, the positions of intended stations, the tracks of survey lines, and the locations of installations and equipment.** Chart attached**6. Dates****6.1 Expected dates of first entry into and final departure from research area by the research vessel:** Entry: 30 May 2014 Departure 28 June 2014**6.2 Indicate if multiple entry is expected Yes/No** No**Dates if known**

7. Port Calls

7.1 Dates and names of intended ports of call in (Name of coastal state)

No port call planned

7.2 Any special logistical requirements at ports of call

7.3 Name(s) and Address/Contact details of shipping agent (if known)

8. Participation

8.1 Extent to which (name of coastal state),

will be enabled to participate or to be represented in the research project.

One berth for an observer from each coastal state is offered in accordance with UNCLOS Art 249 (1a).

8.2 Proposed dates and ports for embarkation/disembarkation

Embark 30 May 2014 St John's, Canada	
Disembark 17 July 2014 Immingham, UK	

9. Access to data, samples and research results

For (name of coastal state)

9.1 Expected dates of submission of preliminary reports which should include the expected dates of submission of the final results.

Six months after completion of Cruise

9.2 Proposed means for access to data and samples

All data will be publicly and freely available at the CLIVAR data centres, accessible by internet. This is the recommended means of access for users of the data in Greenland

In addition, copies of data will be provided on data CD/DVD to any address requested in Greenland.

9.3 Proposed means to provide the assessment of data, samples and research results or provide assistance in their assessment or interpretation

Cruise report in National Oceanography Centre Cruise Report series.

Reports posted on NOC website

Scientific papers in internationally available scientific journals (eg Journal of Physical Oceanography and equivalent)

9.4 Proposed means of making research results internationally available

Reports posted on NOC website

Scientific papers in internationally available scientific journals (eg Journal of Physical Oceanography and equivalent)

10. COMPLETE THE FOLLOWING TABLE - SEPARATE PAGE FOR EACH COASTAL STATE:

Name of Coastal State Greenland

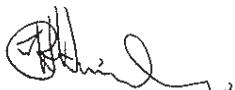

Port Calls/Dates None planned

SCIENTIFIC EQUIPMENT

Indicate "YES" or "NO" and Distance from Coastal Baseline

List Scientific Work by Function eg: Magnetometry Gravity, Diving, Seismic, Bathymetry, Seabed Sampling, Trawling, Echo Sounding, Water Sampling U/W T.V.: Moored and Towed instrument	Water Column Incl. Sediment Sampling on the Seabed	Fisheries Research within Fishing Limits	Research Concerning the Natural Resources of the Continental Shelf or its Physical Characteristics	Distance from Coast	
				Within 12 NM	Between 12 - 200 NM
Bathymetry	No	No	No	Yes (0 to 12)	Yes (12 to 200)
CTD	Yes	No	No	Yes (0 to 12)	Yes (12 to 200)
Water samples on station and underway	Yes	No	No	Yes (0 to 12)	Yes (12 to 200)
Water velocity by Acoustic Doppler Current Profiler on station and underway	Yes	No	No	Yes (0 to 12)	Yes (12 to 200)
Air sampling	No	No	No	Yes (0 to 12)	Yes (12 to 200)
Deploy Argo floats	Yes	No	No	No	Yes (12 to 200)
List other Equipment					

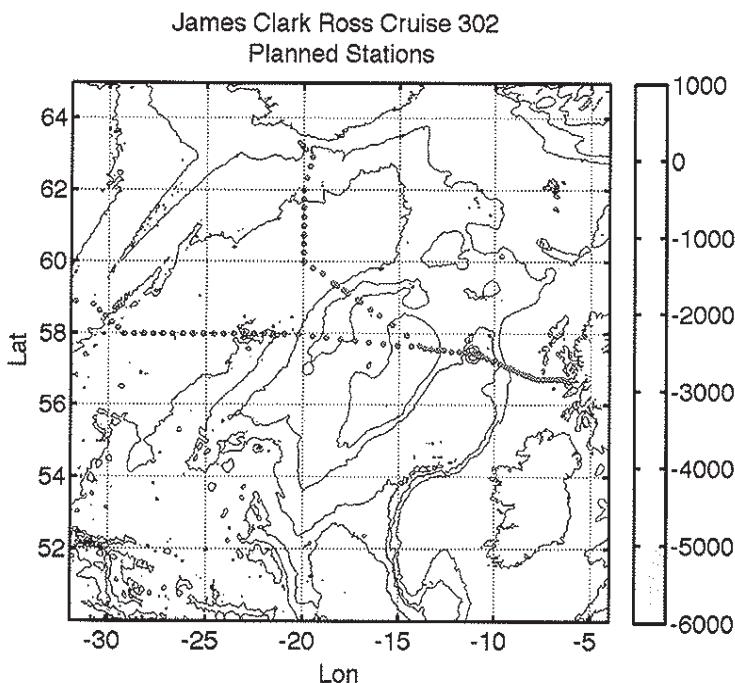

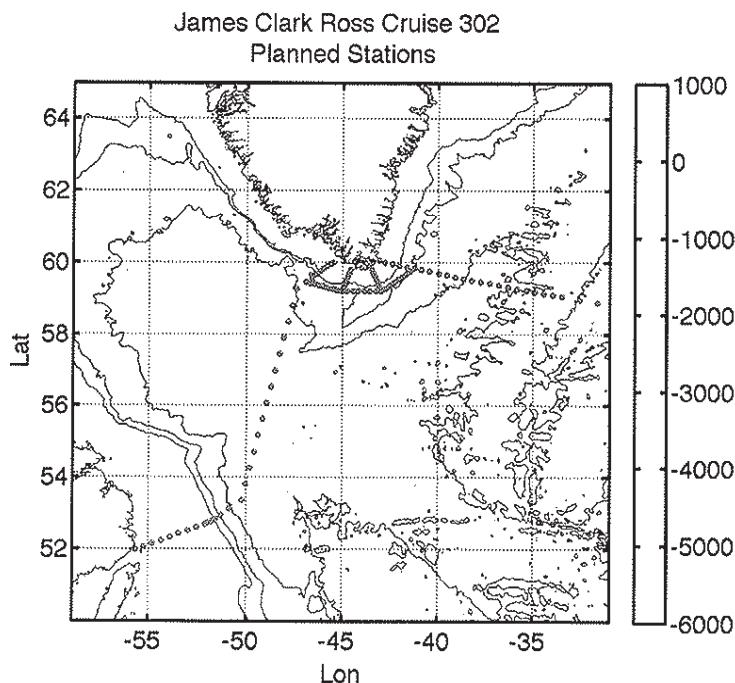

Signed on behalf of the Principal Scientist (See Section 1.3 above)

CJ H Hindley – Ship Operations and Programme Manager,

British Antarctic Survey (See Section 1.5 above)

Provisional station positions for RRS James Clark Ross Cruise 302

Cruise JR302 provisional track plot. Upper panel shows western sections to be completed first. Lower panel shows eastern sections.

The work will start near Canada (station 1) in the upper panel, and cross the Labrador Sea ending at station 38. A series of sections will be worked around the southern tip of Greenland (stations 39 to 83), before heading east on the 'AR7E'

section (stations 84 to 152). The remaining section from the junction point (station 135) up to Iceland (stations 170 to 197) will be occupied last. Station positions are nominal. Actual positions will be chosen depending on time, weather or other operational requirements.

Provisional station list for RRS James Clark Ross Cruise 302
